BUILD A BIRD

Use your knowledge of the wide variety of bird adaptations to create your very own imaginary bird! Consider your imaginary bird's **niche**, or role in the ecosystem, and what specific adaptations it would need to survive there. For example, a "Left Sock Eating Creeper" may need a scissor-like beak to snip socks into small, bite-sized pieces and a good sense of smell to locate the dirty socks it loves to eat! Create your imaginary bird below!
