Daily Planetarium

Shows:

\$5.00 Adults
 \$3.00 Children

under 5 years are free

All shows start on time.

Due to safety concerns, no admittance into

shows once doors are closed.

Golden Pond Planetarium:

270-924-2243

270-924-2237

*recommended for 6 & above

For group reservations call 270-924-2020

Schedule subject to change

Legends of the Night Sky

Children and adults will enjoy this animated laser show where Aesop the owl will lead you on a light-hearted look at the Greek mythology associated with some of the constellations. This includes the stories behind the mighty warrior Perseus, the beautiful princess Andromeda, Cetus, the terrible sea monster, Scorpio the scorpion, and Orion the hunter. A non-laser full-dome version of this show is also available.

The Little Star That Could

Children love a good underdog story. This full-dome presentation is about the newest baby star in the sky - Little Star. He quickly discovers he is just an average star, but he yearns to become special and have planets of his own. Along the way in his quest, he meets other stars and learns what makes each star special. He also discovers much about planets and what it takes to lead a solar system.

Earth, Moon & Sun

The entire family will enjoy discovering the secrets about our home planet and its most familiar neighbors with the help of Coyote, an amusing character adapted from Native American oral traditions who has many misconceptions about how these three celestial objects interact. Laugh out loud as Coyote attempts to explain how the moon and sun always appear to astound us with their celestial antics.

Wildest Weather in the Solar System

Teens, adults, and even children can appreciate this full-dome presentation from National Geographic. Join us aboard the imaginary space ship Erion as you journey through our solar system looking for the planet with the wildest weather. Witness the most beautiful, powerful, and mysterious weather phenomena in the solar system! Once enlightened, you will most assuredly be thankful that we live on Earth!

Back to the Moon for Good

Your family will enjoy this full-dome presentation narrated by Tim Allen. Right now there is a new space race going on as teams of young scientists all around the globe compete for 30 million dollars in prize money offered by Google to see who will be the first private organization to land a rover on the moon in 2017. Not since the Apollo missions 40 years ago has there been this much lunar exploration.

Firefall

If you have ever enjoyed a meteor shower or made a wish upon a "shooting star", you will enjoy this full dome presentation. All aspects of meteor showers are explored in vivid detail. Where meteors come from, what they are made of, past impact evidence, and possible future impact predictions may surprise you. Comets and asteroids are also discussed making this show about anything that could fall on your head!

Two Small Pieces of Glass

Each member of your family can tag along with two teenagers to a Star Party where they learn how the telescope has helped us understand space and how telescopes expand our understanding of the Universe. While looking through the astronomer's telescope we explore the Galilean Moons, Saturn's rings, and galaxies. A great full-dome show for those who may be considering a telescope purchase.

Tonight's Sky-Live

Somewhere along the line, planetariums became cool shaped movie theaters and the technology got ahead of the message. You are invited to quietly relax under a canopy of stars that represent tonight's sky. As you do, our knowledgeable and entertaining staff will personally lead you on a tour of planets, constellations, and special celestial events. This live presentation is recommended for ages 6 and above.

From Earth to the Universe

Please come and enjoying the many beautiful full-dome images of our universe on this virtual space tour as seen from the eyes of the worlds largest telescopes including the Hubble Space Telescope. Along the way, you will learn about the history of astronomy, the invention of the telescope, and see impressive images from today's giant telescopes that allow us to probe ever deeper into the Universe.

IBEX

Young children and adults will relate to the inquisitive minds of two teenagers as they search for answers to the question "How large is our solar system"? This presentation takes full advantage of beautiful full-dome graphics as the two teens discover that NASA has a current mission that is not only measuring our solar system, but it is also creating a 3-D map! NASA just discovered our solar system has a tail!
